This sequence represents an N-terminal proteolytic fragment of the Dermatophagoides farinae high molecular weight mite allergen protein (HWM nemap) composition. The HMW-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to IgE present in mite-allergic dog antisera. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  នួនឧទ្ធន
                                                                                                                                         Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a nongrotein susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a nanimal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the callergic response to a nati-Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity.                                                                  This sequence represents Dermatophagoides farinae mite allergen protein (map) PDerf98-536, the mature form of PDerf98-556 (AAY5253). PDerf98-536 chas a molecular weight of 98 kD, comprising 536 amino acids, and is a component of the Dermatophagoides farinae high molecular weight mite component of the Dermatophagoides farinae high molecular weight mite allergen protein (HWM-map) composition. The HMM-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to 1g2 present in mite-allergic dog antisera. Mite allergenic proteins and compositions to motify an animal's hypersensitivity reaction to mite compositions to motify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, cespecially felines, canines, equines, humans, other pets, and work or composition to a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, can be used as vaccines to passively immunise animals as adainst that hypersensitivity, as positive controls in test kits and as tools to control to the proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      17-APR-1998;

                                                                                                                                                                                                                                                                                                                      Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a nongroup protein accoust epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying an animal to an allergic response to a mite. The DNA and protein can be used in the categories of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a clisease. Antibodies that bind to Der HMW-map are useful for inhibiting chinding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 or represent Der HMW-map polypeptides of the invention

```

CT This sequence represents Dermatophagoides farinae mite allergen protein CC (map) pDerf98-555. pDerf98-555 has a molecular weight of 98 kD, comprising 555 amino acids, and is a component of the Dermatophagoides CC farinae high molecular weight mite allergen protein (HMM-map) molecular weight mite allergen protein farinae CC composition. The HMM-map composition was isolated from a D. farinae CC composition. The HMM-map composition was isolated from a D. farinae CC presence of proteins that bound to 19E present in mite-allergic dog CC antisera. Mite allergenic proteins and peptides, and nucleic acids CC encoding them, may be used in therapeutic compositions to modify an CC animal's hypersensitivity reaction to mite allergens. Animals that may be used to mite allergens. Animals that may be continued in the proteins or CC treated include mammals and birds, especially felines, canines, equines, CC proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to positive controls in test kits and as tools to recover desired dust mite to the controls in test kits and as tools to recover desired dust mite to the controls and peptides can also be used to raise antibodies, which have a controls in test kits and as tools to recover desired dust mite to the controls in test kits and as tools to recover desired dust mite to the controls of proteins of proteins.

The DNA and protein an immune response community of a mite and the response composition is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the categories of anti-Der HWW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a categories. Antibodies that bind to Der HWW-map are useful for inhibition complexes, antibodies that bind to Der HWW-map are useful for inhibiting composition of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HWW-map polypeptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated mite allergenic protein of CC Dermatophagoides, designated Der HMW-map protein, and its related nucleic CC acid. The Der HMW-map protein is useful for eliciting an immune response eagainst Der HMW-map protein. The protein or a reagent comprising a non-cc proteinaceous epitope is useful for identifying an animal (e.g., dog, CC act) susceptible to or having an allergic response to a mite. A cC therapeutic composition is useful for desensitising a host animal to an CC disease to a mite. The DNA and protein can be used in the CC detection of anti-Der HMW-map antibodies in animal fluids, and inhibition CC disease. Antibodies that bind to Der HMW-map are useful for inhibiting CC binding of proteins to IgE, to prevent immunocomplex formation, thus creducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           against Der HMW-map protein. The protein or a reagent comprising a non-
proteinaceous epitope is useful for identifying an animal (e. gr., dog,
cat) susceptible to or having an allergic response to a mite. A
therapeutic composition is useful for desensitising a host animal to an
allergic response to a mite. The DNA and protein can be used in the
detection of anti-Der HMW-map antibodies in animal fluids, and inhibition
of immunoglobulin (1g) or Der HMW-map protein activity associated with a
disease. Antibodies that bind to Der HMW-map are useful for inhibiting
binding of proteins to IgB, to prevent immunocomplex formation, thus
reducing hypersensitivity responses to mite allergens, and as vaccines
against mite allergen hypersensitivity. Sequences AAU96314-AAU96342
represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an Dermatophagoides, designated acid.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC protein (map) Derry98-509. Pherp98-509 has a molecular weight of 98 kb, comprising 509 amino acids, and has a high degree of homology with the D. CC farinae 98 kb allergen, mapB (AAY55523). Nucleic acid molecules encoding PDerry98-509 were isolated from a D. pteronyssius cDNA library by CC phyridisation with a probe encoding the D. farinae high molecular weight map (HMW-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to comdify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, CC canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as C vaccines to passively immunise animals against dust mite allergens from a mixture of proteins. (Updated con 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease, Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an therapeutic composition is useful for desensitising a host animal to an
                                                                                                                                                                                  WPI;

```

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for a reagent minmune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A

The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 29-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAB94676 standard; protein;
                                                                                                                                                                                      The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2001-318749/34.
   sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the
                                                                                                                                                                                                                                                                                                                                                                                                              Claim 8; SEQ ID NO 15624; 2537pp + Sequence Listing; English
                                                                                                                               of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (HELI-)

                                                                                                                                                                                      specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13638 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonuclectides, all of which are used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 7570, Application US/09543681A
Patent No. 6605709
GENERAL INFORMATION:
APPLICANT: GARY BRETON
TITLE OF INVENTION: DUCKIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABI
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.1002-001
CURRENT APPLICATION NUMBER: US/09/543,681A
CURRENT FILING DATE: 2000-04-05
CURRENT FILING DATE: 2000-04-05
                                                                                                                                                                                                                                                                                                                        PRIOR APPLICATION NUMBER: US 60/128,706

Sequence 2, Application US/09719190

Patent No. 6649171

GENERAL INFORMATION:

APPLICANT: Thomnard, Joelle

TITLE OF INVENTION: Moraxella Catharrahalis Polynucleotides

TITLE OF INVENTION: and Polypeptides

FILE REFERENCE: BM45326

CURRENT APPLICATION NUMBER: US/09/719,190

CURRENT FILING DATE: 2001-05-14

PRIOR APPLICATION NUMBER: PCT/EP99/03824

PRIOR APPLICATION NUMBER: PCT/EP99/03824

PRIOR FILING DATE: 1999-05-31

NUMBER OF SEQ ID NOS: 6

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 2

LENGTH: 947

TYPE: PRT

ORGANISM: Moraxella catarrhalis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           on:
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8

AcMNPV orf150 - Bombyx mori nuclear polyhedrosis virus (isolate T3)

C;Species: Bombyx mori nuclear polyhedrosis virus, Bm6NPV

A;Variety: isolate T3

C;Date: 03-Dec-1999 #sequence_revision 03-Dec-1999 #text_change 11-May-2000

C;Accession: T41887

R;Gomi, S.; Majima, K.; Maeda, S.
J. Gen, Virol. 80, 1323-1337, 1999

A;Title: Sequence analysis of the genome of Bombyx mori nucleopolyhedrovirus.

A;Accession: T41887

A;Accession: T41887

                                                                                                                                                                                                                                                                                                             it becomes catalytically active and recognizes and methy sequence CC[AT]GG.
SUBCELLULAR LOCATION: Nuclear (Probable).
SIMILARITY: Belongs to the C5-methyltransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                  FUNCTION: Does not have a cytosine-5 methyltransferase activity due to the insertion of a Ser residue between the Pro-Cys motif found at the active site of C5 MTases. When this serine is deleted the control of the co

Cloning, expression, and characterization.";
J. Biol. Chem. 273:17665-17670 (1998).

- I- FUNCTION: Binds chitin but not cellulose. May be involved in the spatial organization of PM.

- I- TISSUE SPECIFICITY: Adult peritrophic membrane.

- I- DEVELOPMENTAL STRAGE: Expressed in adult but not larval guts, whole gupae or whole bodies minus gut.

- I- PTM: Glycosylated.

                                                                                                                                                                                                                                                                                           FUNCTION: May have an important role in respiratory metabolism. Cryptosporidium have a relic mitochondrion with no function in energy metabolism so it is not known if PFOR has a function. CATALYTIC ACTIVITY: Pyruvate + COA + NADP(+) = acetyl-COA + CO(2)
                                                                                                        MISCELLANBOUS: Arose from gene fusion of pyruvate:ferredoxin oxidoreductase and cytochrome-P450 reductase. Gene fusion has been found in Euglena and Cryptosporidium.

SIMILARITY: The irron-sulfur centers are similar to those of bacterial-type 4Fe-4S ferredoxins.

SIMILARITY: Contains 1 flavodoxin-like domain.

      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                         Score
